

LapCharger™

Managed ultra-safe power and charging unit

The LapCharger™ is a power and charging resource for laptops or netbooks, providing simultaneous battery charging and safe power for up to 10 devices from a single, central desk position.

The LapCharger™ provides an essential benefit to any classroom (or office) using designated devices, ensuring continued 24/7 usage of ICT resources for students. No more flat batteries causing classroom disruption or teachers wasting valuable teaching time dealing with ICT issues!

Every LapCharger™ is configured to suit a specific make and model of laptop or netbook. It features 10 individual cables, therefore a maximum capacity of 10 devices being charged at once in the fastest possible time. These 10 fixed cables provided are available either 1.5m or 3m in length.

The LapCharger™ has been designed to be ultra safe and easy for students to use. Simply plug the small connector socket into the power port of the device and instant power is provided.

The LapCharger™ has a temperature controlled fan system and effective ventilation, so it will not overheat. It comes with small LED lights indicating the charging status.

The LapCharger™ incorporates a standard security slot (allowing it to be tethered with a security cable like a laptop) and has been designed to ensure ventilation cannot be blocked, nor power connections damaged and features built in handles for easier transportation.

The LapCharger™ meets all required British Safety Standards and is independently CE Certified.

Data Transfer (DTM)

New for 2011 the LapCharger™ is now available to include our Data Transfer functionality, allowing up to 10 devices to be simultaneously updated from a single network port.
