

Charge Locker

Charging and storage locker system

Introducing the 'Charge Locker' is an individual bay, economical locker system with full charging facilities for mobile phones, smart phones, BlackBerrys, digital cameras, Bluetooth devices, PDAs or mini laptops etc.

The 'Charge Locker' system is comprised of single units each of four bay, multiples of which can be interconnected together.

Each individually lockable bay has two compartments featuring four standard UK 3 pin sockets and two USB charging points. The USB points are ideal for charging BlackBerrys and other similar devices, whilst the standard sockets are suited to any battery powered electronic device, such as a mobile phone which is charged via an AC adaptor.

With steel construction and independent CE Certification, the 'Charge Locker' has been designed to provide economical storage and charging. When devices are being charged heat is generated, therefore all bays are kept cool with an automatic temperature controlled fan system.

The 'Charge Locker' is available in other sizes.

2 x USB Charge Points

Temperature Control

2 Shelves
