

# Diplomat™ LMS

Self service laptop allocation and deployment

Full integration with most Library Management Systems (LMS)

Saves resources and improves student experience

Total device management

Ultra-safe charging

*\* Please note that images are for illustrative purposes only.*

The LapSafe® Diplomat™ LMS provides students and teachers with individual access, allocation, and deployment to securely stored and safely charged laptops or tablets using an intelligent access control system. Enabling schools to track and monitor equipment use and save resources whilst providing students greater freedom and an improved user experience.

## Functionality

- Full integration with most Library Management Systems (LMS) using Standard Interchange Protocol (SIP2)
- Fully auto self service deployment of laptops or netbooks
- MiFare™, biometric, barcode and magnetic stripe access
- 19" clear, simple touch screen interface
- Printed receipt for student
- Dual ID confirmation, to ensure the right student has the right laptop locker
- Auto cancel of loan if locker not accessed within a given time frame
- Will deploy the best charged laptop at any point in time
- Will prevent deployment of laptops with too little or no charge
- LapSafe® SmartLine™ with PowaSave® fully managed charging system
- Safe storage and charging
- Simultaneous charging of all devices
- Fully automatic temperature management with powered fans
- 'Auto detect' for laptop charging and door shut on laptop return
- Network compatible for Data Transfer (optional)

## Quality assured

- Safe power management
- Safe edges to all steel construction
- Fully and independently CE Certified meeting all required British safety standards

## Construction

- Steel chassis and individual locker doors
- Welded and riveted construction
- 12 self service laptop locker bays per bank
- Available from 12 to unlimited number of lockers (in banks of 12)

## Technology partners

## Functionality

The self service Diplomat™ LMS from LapSafe® Products is a multi-bay modular locker system designed to store, safely charge and deploy laptops and other similar devices to users via a 19" touch screen interface.

Simple to use; after identifying themselves with either MiFare™, biometric, barcode or magnetic swipe, a couple of touches and a student is issued a best charged laptop for their individual use.

With full LMS integration, the student is identified that they are allowed to borrow a device, the LMS is notified of the loan. A quick and simple receipt is provided to the student after agreeing to the terms and conditions of the establishments 'self service' loan pool.

With students easily distracted, if they do not re-identify themselves at the given laptop locker within a given timeframe the loan is automatically cancelled.

With our SmartLine™ with PowaSave® charging system, we can ensure that all laptops are charged simultaneously in the fastest possible time and only deploy a laptop with a reasonable charge to a student. At all times the best charged laptop is always deployed as a priority. With PowaSave® when all laptops are charged, our power supplies are automatically switched off, until the next device needs charging. Saving you power, money and reducing your carbon footprint.

Individual user bays are the optimum size to store most makes and models of laptop or netbook. Available from 12 bays, the Diplomat™ LMS self service modular locker system can be tailored to suit the user's needs.

## Quality Assured

The Diplomat™ locker system exceeds all required British Safety Standards, has been independently CE Certified and meets HSE guidelines.

## Construction

Manufactured in the UK, the Diplomat™ LMS has a steel chassis, continuous hinge and doors, fitted with some of the latest high security electronic locks providing over 150kg of resistance if attacked. We continue to source recycled steel (approx. 70%) to ensure we have a minimal impact on the global resources.

The latest manufacturing techniques are employed to consistently produce a high quality product.
