

What makes LapSafe® the best!

Store, recharge and manage up to 40 Laptops or 80 mini Laptops (UMPCs)

upgradeable

Data Transfer Upgrade allows for mass updates to all laptops saving time

ultra-safe charging

Optional Network capability, Alarm, Printers and Docking Station

supports m-learning

fully power managed

All our cabinets include the LapSafe® power management system. This ensures laptops are never overcharged and always protected from power surges.

ultra-safe charging

Our SmartLine™ charging technology requires no AC Adaptors ensuring no student comes into contact with 240 volt power.

energy efficient

SmartLine™ is twice as energy efficient as using AC Adaptors and makes classroom deployment quick and easy.

upgradeable by design

All our cabinets have a modular construction allowing for future upgrades without buying a whole new chassis, providing a sustainable solution. Our cabinets change, as do your needs!

simultaneous charging

We do not use time switches or priority charging and our power management ensures that we never trip fuses, whilst charging each and every laptop in the minimum possible time.

temperature control

The temperature in all our cabinets is thermostatically controlled automatically. No air holes are required weakening the chassis or fans that waste power by running continually.

ultra secure

Our cabinets are one of the strongest on the market with a fully welded chassis and Enhanced Door Security, featuring high security locks, anti-jimmy plates and reinforced steel doors. All this is achieved by ingenious design which keeps the overall cabinet weight down and therefore handling and manoeuvrability up.

The original UK innovator of laptop recharging cabinets
