

## UnoCart™

### Laptop charging trolley

With restrictive budgets and the requirement for mobile ICT in schools increasing, it is a challenge deciding between quality and price when it comes to laptop and netbook trolleys! The UnoCart™ is designed to far exceed the abilities of its rivals at a competitive price, incorporating: simultaneous charging, safe power management, twin thermostatically controlled fans and effective cable management.

The UnoCart™ is a cost effective mobile solution providing secure storage and safe charging for up to 24 laptops or 30 netbooks! The UnoCart™ allows schools to share ICT resources between classrooms, whilst providing safe student access to fully charged mobile computing.

### Safety First

The UnoCart™ range includes an array of features designed solely to ensure the safety of its users, making certain no user comes into contact with 240 volt power and ensures no risk of any significant residual voltage at the mains plug (exceeding HSE recommendations).

All laptops are charged within the cabinet horizontally without 'pull out shelves', which can cause instability and a danger of the cabinet overturning. The rear of every cabinet has a service access door designed for ICT technician's use, with different locks to the front, which prevents both access by students, and theft access to the devices stored inside.

All UnoCart™ cabinets have been independently CE Certified and meet HSE guidelines.

### Options

The UnoCart™ is available with 4 optional extras, each providing additional functionality and capability. They can be factory fitted, or simply upgraded in the future by the user.

### Features and Benefits
