

Antimicrobial Coating

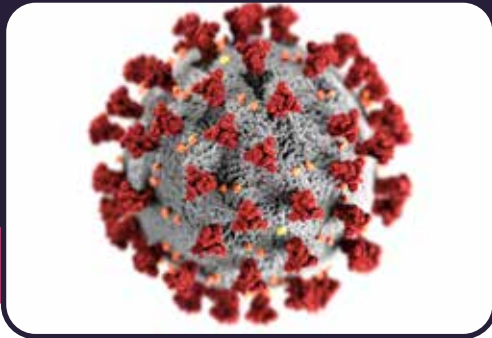

What is antimicrobial?

Antimicrobial is used to describe substances which demonstrate the ability to reduce the presence of microbes, such as bacteria and mould.

Antimicrobial vs antibacterial

An antimicrobial is effective against a broad spectrum of microbes: this includes bacteria, mould, fungi and even viruses. An antibacterial, on the other hand, is only effective against bacteria.

Continuous protection

The silver ion technology within touch coatings works 24-hours a day, for the expected lifetime of the product, to provide integral protection against microbes.

Protects in two hours

The silver ion technology creates surfaces upon which 99.9% of microbes cannot survive. Laboratory and real-life testing have proved that the technology reduces microbes by 80% in just 15 minutes and 99.9% in only two hours.

Fast-acting protection

80% of microbes are eradicated within 15 minutes, and up to 99.99% are gone within 2 hours. Proven effective against MRSA, e.coli and even at deactivating influenza (h1n1) virus.

Antimicrobial Technology

Silver ion technology

Antimicrobial products use silver ion antimicrobial additives which are suitable for deployment in a broad range of materials and applications, including paints, coatings, textiles, polymers and other material types.

- Reduction of bacteria by 99.9%
- Defends against viruses
- Anti-fingerprint protection
- Prevents growth of mould
- Seals porous surfaces
- Restores & enhances
- Reduces odour
- UV protection and colour fade
- Indefinitely maintainable
- Guaranteed not to crack or peel
- High scratch resistance
- Ten-year proven coating

Antimicrobial Coating for LapSafe Products

The antimicrobial coating can be applied to our self-service lockers front doors and handles, either on-site for existing installs, or when a new order is placed.

This coating can also be applied to our trolley range to help combat the fight against the spread of bacteria and viruses.

Please contact our sales team on 0800 130 3456 or email sales@lapsafe.com for a quotation
